

Color blanco

CALCITA
(si reacciona con HCl)

A microscopic image showing a dense field of small, angular, light-colored grains (quartz) embedded in a darker, more crystalline matrix. The grains vary in size and shape, with some showing distinct cleavage patterns. The overall appearance is that of a fine-grained igneous or metamorphic rock.

Color blanco

CUARZO
(si ralla el vidrio)

Color gris plateado

Color verde y blanco

**ANFÍBOL VERDE,
PLAGIOCLASA**

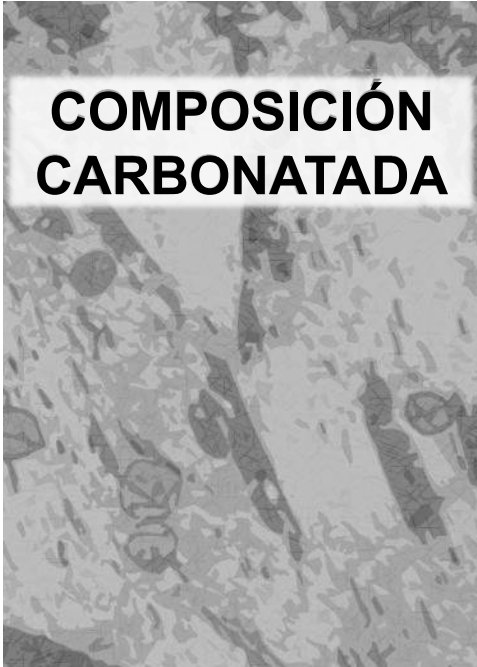

*Color verde oscuro y
rojo*

**PIROXENO VERDE,
GRANATE**

A grayscale micrograph showing a complex, heterogeneous material structure. The image displays various shapes and textures, including elongated, needle-like or fibrous structures, and more rounded, irregular particles. The overall appearance is that of a composite or a mixture of different phases, typical of a quaternary composition in materials science.

COMPOSICIÓN CUARCÍTICA

A grayscale microscopic image showing a complex, porous, and fibrous structure, likely a carbonated material. The structure consists of interconnected fibers and small, rounded particles, creating a highly textured and irregular surface. The overall appearance is that of a highly porous, possibly crystalline or semi-crystalline material.

**COMPOSICIÓN
CARBONATADA**

A grayscale micrograph showing a complex, textured material structure. The image displays various shapes and patterns, including elongated, needle-like structures and smaller, more rounded features, all set against a grainy, light-colored background. The overall appearance is that of a crystalline or polycrystalline material with a heterogeneous microstructure.
