See pictures bigger

If when labeling one of the **pictures isn't clear enough** to decide its label this feature can be used to **see a more defined and bigger version** of the picture in a new window.

In order to access to this option **the desired image must be clicked with the right button of the mouse**.

Once we've decided its label the new window **can be closed pressing any of the mouse's buttons** both on the new window or in the usual one.
