If we could offer a top quality education to everyone around the world for free, what would that do? Three things.

First it would establish education as a fundamental human right, where anyone around the world with the ability and the motivation could get the skills that they need to make a better life for themselves, their families and their communities.

Second, it would enable lifelong learning.

And finally, this would enable a wave of innovation, because amazing talent can be found anywhere.

"Perhaps the greatest of all pedagogical fallacies is the notion that a person learns only the particular thing he is studying at the time. Collateral learning in the way of formation of enduring attitudes, of likes and dislikes, may be and often is much more important than the spelling lessons or lessons in geography or in history that he learned. For these attitudes are fundamentally what count in the future. The most important attitude that can be formed is that of desire to go on learning"

**Internet y la información**

En una interesante **conferencia** en la pasada reunión de la ACP (*Acadèmic Publishing i Net*) del 2013, **Víctor Henselak**, *editorial y CEO de Henselak*, comparaba los efectos que podía tener la atención social con respecto a la comunicación científica con los que ha tenido *Wagner* con respecto a la distribución de misa grabada.

A algunas cosas podemos tener hoy por cierta respecto a internet es su capacidad de cambiar los modelos de negocio que tienen que ver con la información. La misma lo hizo en primer lugar y luego muy rápido. Las revistas científicas lo están viviendo ahora con la profunda transformación que sufren bajo la modesta pero poderosa idea que subyace bajo el movimiento del Acceso abierto. La industria de los libros será la siguiente en vivir profundas transformaciones derivadas de las nuevas postibilidades de acceder (pagando o no) a la lectura.

## MOOCs and Intellectual Property: Ownership and Use Rights

Massively Open Online Courses (MOOCs) have become the buzzword these days. Besides the interest and the hype associated with MOOCs, campuses are having serious discussions about the opportunities and challenges that these online courses pose. The EDUCAUSE Executive Briefing, [Vital Campus Leaders Need to Know About MOOCs](#), highlights a number of key issues for colleges and universities to understand about MOOCs, including Intellectual Property (IP) concerns. MOOCs may not be as open as is suggested in the name, when it comes to the topic of Plagiarism. As noted in the Briefing, “Some commercial MOOC platforms have highly proprietary terms and conditions that claim ownership of course content and prohibit sharing or renting of material.”

Looking at the Terms of Service for Coursera, edX, and Udacity revealed some licensing language that colleges and universities should be cognizant of when contemplating joining a MOOC. Note that these sites were last accessed on April 5, 2013.

### On the use of material on these sites

Each provider establishes its own proprietary claim about its material and the use of it.

#### Coursera – Terms of Service

##### Permission to Use Materials

What about librarians? That's the question on our minds as the world declares to love free massive open online courses, or MOOCs. Librarians are a major part of universities, but it's not always entirely missing from the MOOC conversation. Let's dig a little deeper.

Librarians offer resources, from essential to interesting support, that are essential to the success of MOOCs as they grow both in numbers and in [accessibility](#). As MOOCs become an increasingly solid and valuable resource, it's clear that they can benefit from other great educational resource: librarians.

## Post-MOOC Era

Small private online courses (Spocs) are a competing model to the Mooc (massive open online course). Despite much excitement about how Moocs might transform the education system, they have so far not been able to show how they will fund themselves. In addition, the "open" nature of the Mooc courses encourages large numbers of participants with very varied abilities because anyone with an internet connection can participate. This raises problems with assessment and therefore how much a Mooc can be worth on someone's curriculum vitae as they go on to jobs or further study. Spocs offer some solution in that students are selected, which limits numbers of participants, and ensures they satisfy some entry requirements for the course. Spocs allow educational establishments to use them in a "blended learning" approach that combines classroom teaching with online learning.

# 10 reflections on the SPOC vs MOOC conversation – Is Harvard moving out of the 1990s?

## 10 reflections on the SPOC vs MOOC conversation - Is Harvard moving out of the 1990s?

SEPTEMBER 30, 2013 | BLOG | NO COMMENTS |

In the past two weeks, I've read [countless articles](#) about how Harvard is moving to the "post-MOOC era." These same articles describe their gradually shifting attention from MOOCs to SPOCs (Small Private Online Courses). Of course, those of us in the field of online learning know that small private online courses have been around for decades, and we have a solid body of research and literature about [what they call SPOCs and the rest of us just call online courses](#). Until a couple of years ago, with the media fascination about MOOCs, almost everything that we did in online learning was about small, private, online courses. That is why it baffles me when the authors of these newest articles write about SPOCs as if they are some innovation. At this point, I offer ten simple observations and reflections.

# Are We Beginning the Post-MOOC ERA? Two SPOCs (Small Private Online Courses) are Underway From Harvard/

## Are We Beginning the Post-MOOC ERA? Two SPOCs (Small Private Online Courses) are Underway From Harvard/edX

Filed by [Gary Price](#) on September 27, 2013

From the BBC.

Harvard, one of the world's most influential universities, is moving on to Spocs – which stands for small private online courses. Nothing to do with Star Trek and sombre Vulcans, but plenty to do with ambitions 'to boldly go'.

[Clip]

Enter the Spoc. And the clue is in the "small, private" part of the name. These courses are still free and delivered through the internet, but access is restricted to much smaller numbers, tens or hundreds, rather than tens of thousands.

It means a selection process for applicants and the capacity for a more customised experience. Looking further down the track, it wouldn't be difficult to imagine fees and course credits.

Harvard and University of California, Berkeley, part of the edX online alliance with the Massachusetts Institute of Technology, are among the universities beginning to experiment with this more refined model.

### Del MOOC al SPOC

Publicado por [M. Jesús](#) el 09-10-13 [#MOOC](#) [#SPOC](#) [Leer o comentar](#)

Todos conocemos que las siglas MOOC responden a Massive Open Online Courses, los cursos masivos online, abiertos, en la mayoría de los casos gratuitos, que en los últimos tiempos han dado a organizaciones e instituciones educativas en todo el mundo millones de usuarios registrados para seguir sus aprendizajes en línea.

Es de todos conocido el éxito de organizaciones como edX o Coursera, que ofrecen aprender de forma gratuita, desde cualquier parte del mundo y en cualquier momento, sobre temas tan diversos como cálculo, guitarra, arquitectura china, o cocina, por citar algunos.

Sin embargo, parece que este matrimonio perfecto empieza a perder fuerza. Algunos estudios demuestran que el número de abandonos en este tipo de cursos es bastante mayor que los abandonos en la enseñanza-aprendizaje convencional. Los defensores de la educación tradicional, que cuando el fenómeno MOOC apareció, no sabían muy bien como reaccionar, ahora ya se atreven a cuestionarlo públicamente, y eso incluye a prominentes catedráticos que se refieren a los MOOC como una moda pasajera más que una revolución.

Incluso algún que otro pionero y firme defensor de los MOOC, como Anant Agarwal, en la presidencia de edX, habla de que los MOOC necesitan un margen de tiempo y confianza. Pero no se queda ahí, va un paso más allá, y anuncia que en edX llevan un tiempo queriendo aplicar ese aprendizaje a gran escala al campus, a un nivel más pequeño, a la enseñanza presencial.

Aunque aún en pañales, pero con una investigación a gran escala en marcha, y algunos facilitadores de MOOC ya importando la tecnología necesaria para llevarlo a cabo, como por ejemplo charlas archivadas, que los estudiantes presenciales puedan volver a ver tantas veces como quieran, es esta combinación del estilo MOOC con la enseñanza tradicional la que da lugar al nuevo acrónimo, SPOC, equivalente a "small private online course" en inglés, es decir, pequeños cursos particulares en línea, como los cursos particulares de toda la vida, pero ahora en línea al estilo MOOC.

## Harvard plans to boldly go with 'Spocs'

By Sean Coughlan  
BBC News education correspondent

Keep up, keep up. If you're only just caught on to the concept of online university courses called Moocs, then you're in danger of falling behind again.

Harvard, one of the world's most influential universities, is moving on to Spocs – which stands for small private online courses. Nothing to do with Star Trek and sombre Vulcans, but plenty to do with ambitions 'to boldly go'.

And could these be the real deal? The academic chattering Harvard's online experiments says we are already "post-MOOC".

Moocs – massive open online courses – have been something of a hurricane in universities, making a lot of noise and promising to rip everything up.

Pioneered by some of the most prestigious US universities, they have been re-packaging course units into online lessons and making them

## SPOCs Are MOOC Game Changers

### SPOCs Are MOOC Game Changers

Posted on September 26, 2013 by Jim

By [Jim Shrimabuhuro](#)  
Editor

They're billed as SPOCs, or small private online courses, and they're being led by Harvard and UC-Berkeley. According to Rob Lue<sup>1</sup>, Harvard's edX director, "We're already in a post-MOOC era,"<sup>2</sup> and SPOCs are the next generation. Considering the specs on SPOCs, however, SPOC<sup>3</sup> – for selective open online course – may be a better fit for what appears to be a strong candidate for midgen status. The problem with the moniker is that SPOCs aren't always private.

Rob Lue, Harvard's edX director

## SPOCs may provide what MOOCs can't

### SPOCs may provide what MOOCs can't

The acronym may be new, but the SPOC concept isn't

By [Irene](#)  
[University Business](#), July 2013

It's hard to follow higher education news these days without seeing a reference to MOOCs. The online learning platforms from edX, Coursera, Udacity, and others were launched to great fanfare over the last two years. Proponents praise them for their potential to change education, while critics chalk them up as more hype than hope.

To be sure, for all their promise, MOOCs also have their share of problems. For one thing, as has been documented in each of the popular platforms, the attrition rate is high. For the thousands of students that enroll in a MOOC, only a fraction will fulfill the requirements of the course.

Then there is the question of accreditation. Coursera, edX, and Udacity typically provide certificates of achievement rather than college credit, although that will likely change as more courses seek accreditation. Coursera, currently partnered with 70 institutions, announced last fall that it would work with the American Council on Education (ACE) to evaluate credit equivalency for its courses. Georgia Tech announced in May that it would offer the first accredited MOOC-based masters degree in computer science via a partnership with Udacity and AT&T.

Perhaps the biggest issues, however, are revenue and sustainability. MIT and Harvard each pumped \$30 million into launching edX. Coursera began with \$16 million in venture capital. But, with courses and materials typically provided free to students, the question of how these programs will sustain themselves is a big one.

Anant Agarwal, president of edX, says he anticipates the program will ultimately be self-sustaining. "There are a number of ways you can do this that aren't rocket science. For example, you can have executive education programs that corporations pay for. Or, you can offer various kinds of placement services to employers," he says. "Today, employers spend a lot of money with recruiters to find the best candidates. It's not unusual to see a recruiter earning 20 to 25 percent of the first month's income for placing an engineer. So, if we can help identify those top-notch learners around the world, there is incredible value in that."

Agarwal also discussed an offshoot of the MOOC model that may have revenue potential. "It's a business-to-business concept that Armando Fox at University of California, Berkeley has dubbed SPOC, for small, private online courses. You create a course and license it to a university or an organization or corporation."

Amb motiu de la celebració del primer seminari de l'Aula Jordi Rubió i Balaguer 2013-2014, “Els MOOC: una oportunitat per a les universitats?”, la Biblioteca us ofereix aquesta guia de lectura.
