Dear Colleagues,

It gives me great pleasure to inform you that our Panta Rhei Synthesis Paper has been accepted!

Thank you all very much for your contributions.

We have now also organised the list of affiliations to be used for the paper (see attached). As you updated your affiliation only a few weeks ago, I do not expect any problems. However, if you discover an error, please let me know immediately as the paper is now going into production.

Best regards

Heidi

Dear Dr Kreibich,

Manuscript title: Panta Rhei: a decade of progress in research on change in hydrology and society

Thank you for submitting a revised version of the above referenced manuscript. In my earlier recommendation, I suggested that you address the most critical comments of the reviewers without making significant changes to the structure of the manuscript, which closely reflects the view of the working group. Indeed, the paper is both a synthesis of the work of the researchers involved in the Panta Rhei initiative and an "opinion paper" by the same group. I believe that the Authors have done a very good and thorough job in their revision, taking the best of the recommendations/suggestions of the reviewers.

I am therefore pleased to accept your manuscript in its current form, subject to minor corrections that will be addressed at the production stage, and I congratulate the Authors on this important contribution.

Your manuscript will now proceed through the remaining stages of the publishing procedure:

Before being sent to our publishing partner, Taylor & Francis (T&F), your paper will be checked by the HSJ Editorial Office; any queries or minor corrections will be addressed at this stage before your paper is transferred to the production team at T&F.

Once it has been transferred you will be asked to sign the publisher's copyright form (returning it within 48 hours of receipt if possible). You will receive instructions for transfer of copyright from the T&F production editor. Typesetting, copy-editing, and proof checking are undertaken subsequently. T&F will publish accepted author manuscripts online (AMO) in HTML or PDF form once the author publishing agreement has been accepted. The posted file is clearly identified as an unedited manuscript that has been accepted for publication.

This early published AMO will be assigned a digital object identifier (doi), which can be used immediately to cite the

paper. The AMO will be replaced with a final, corrected version (the Version of Record, VoR), and subsequently placed into an issue of the Hydrological Sciences Journal.

Final page proofs will be sent to you for checking when the proof has been copy-edited and typeset by T&F. Please check and return these final proofs to the publisher as soon as possible.

Open Access:

You have the option to pay a one-off preferential Article Publishing Charge (APC) to make your article free to read online via the Hydrological Sciences Journal website (Gold Open Access). This is entirely your choice - if you do not pay the APC you will still be able to post your article in an institutional or subject repository after an embargo period (often called Green Open Access). Please see: <https://authorservices.taylorandfrancis.com/choose-open/publishing-open-access/> for more details on open access options.

Permission:

Please note that it is the responsibility of the authors to ensure that appropriate permissions have been obtained for the reproduction of third-party material. Please ensure that you obtain the appropriate permissions in good time, and retain copies of any relevant correspondence and proof of permission. You will be asked to provide this evidence prior to publication.

Tison Award:

If you are under 41 years of age, your published paper will be eligible consideration for the Tison Award, an annual award made to the authors of an excellent paper by a young author published by IAHS in the previous two years. Note that being eligible by age does NOT mean that your paper will be automatically shortlisted or nominated. Further information is given at <https://iahs.info/About-IAHS/Competition--Events/Tison-Award.do>. Please contact the HSJ Editorial Office if you fit the criteria so that this can be noted in the event that your paper is shortlisted.

Digital Water Globe:

IAHS, the Association of which HSJ is the official journal, offers a tool for sharing scientific research across the world – the Digital Water Globe (<https://dwg.smhi.se/dwg>). This platform offers an overview of ongoing scientific activities and achievements in the hydrological community at different sites across the world. Once the Version of Record of your article has been published, we invite you to consider uploading your abstract and doi link to the 'Scientific publication' section of the DWG – particularly if your research relates to a specific geographic region or if it includes links to published data that might be usefully shared with the community. Posting links to datasets and/or codes and sharing your research through the DWG could enhance your visibility and will also contribute to the body of site-specific research that is accumulating on the DWG. By joining IAHS (membership is free – Register (<https://iahs.info/Members-Area/register/>)), you can acquire a log-in for the DWG.

Thank you for your contribution to Hydrological Sciences Journal. I look forward to receiving further submissions from you and your colleagues in the future.

Yours sincerely,

Dr Aldo Fiori
