Farmàcia

FACULTAT DE FARMÀCIA I
CIÈNCIES DE L'ALIMENTACIÓ

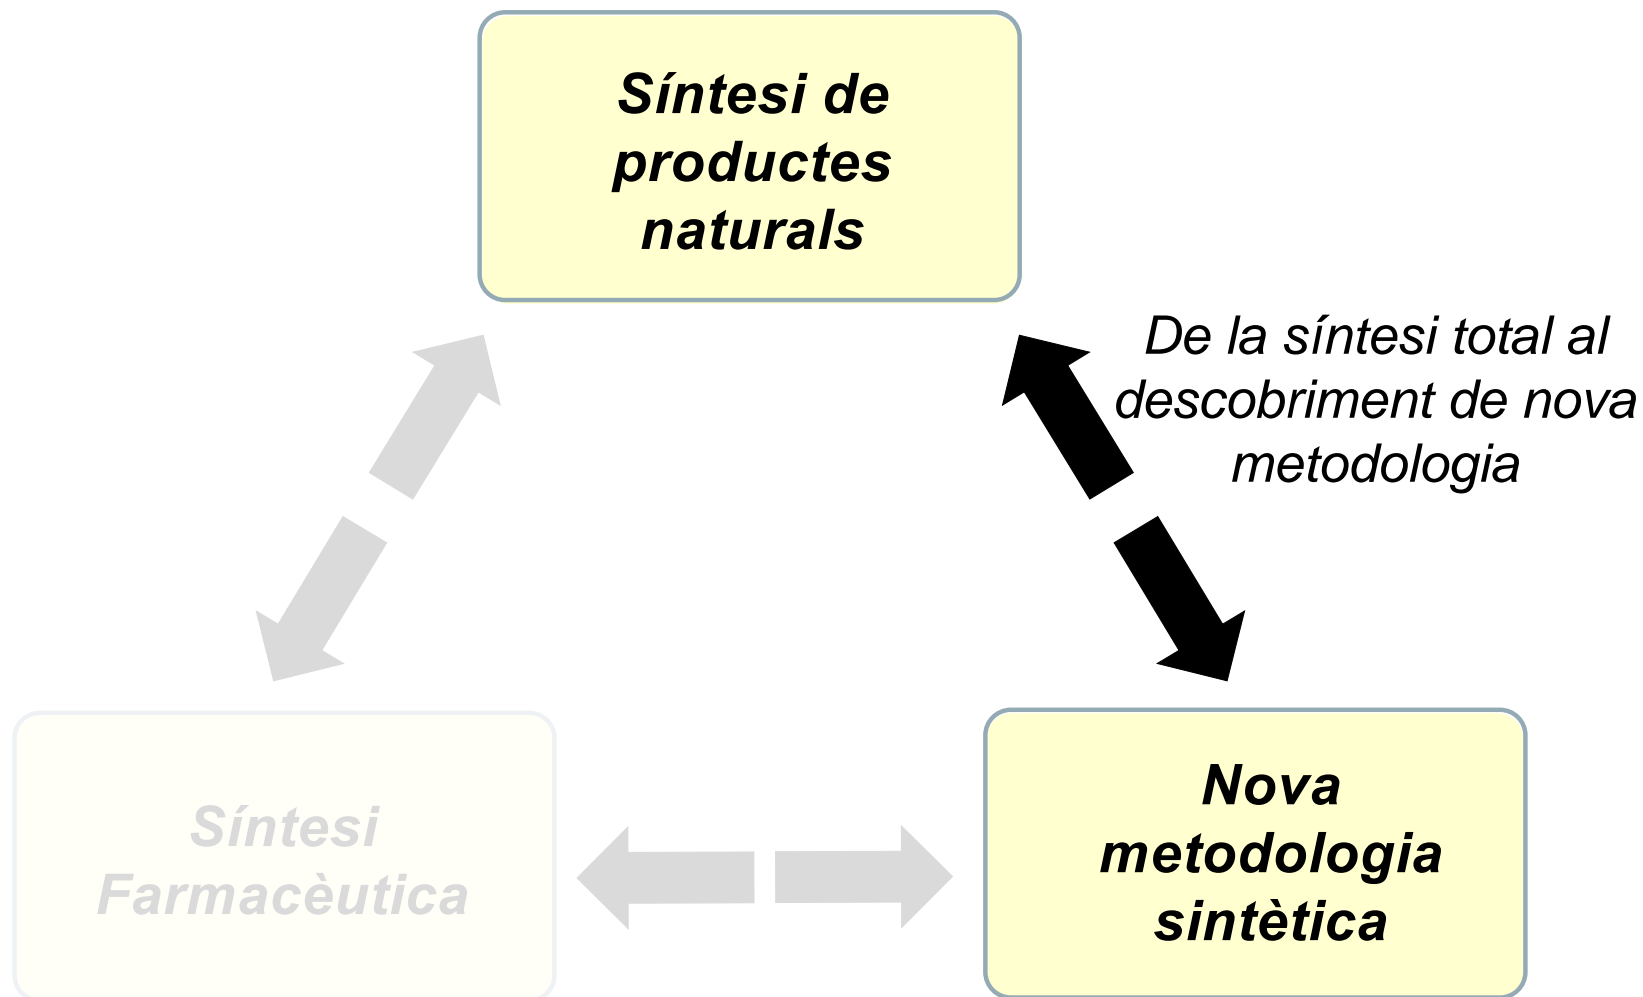

UNIVERSITAT DE
BARCELONA

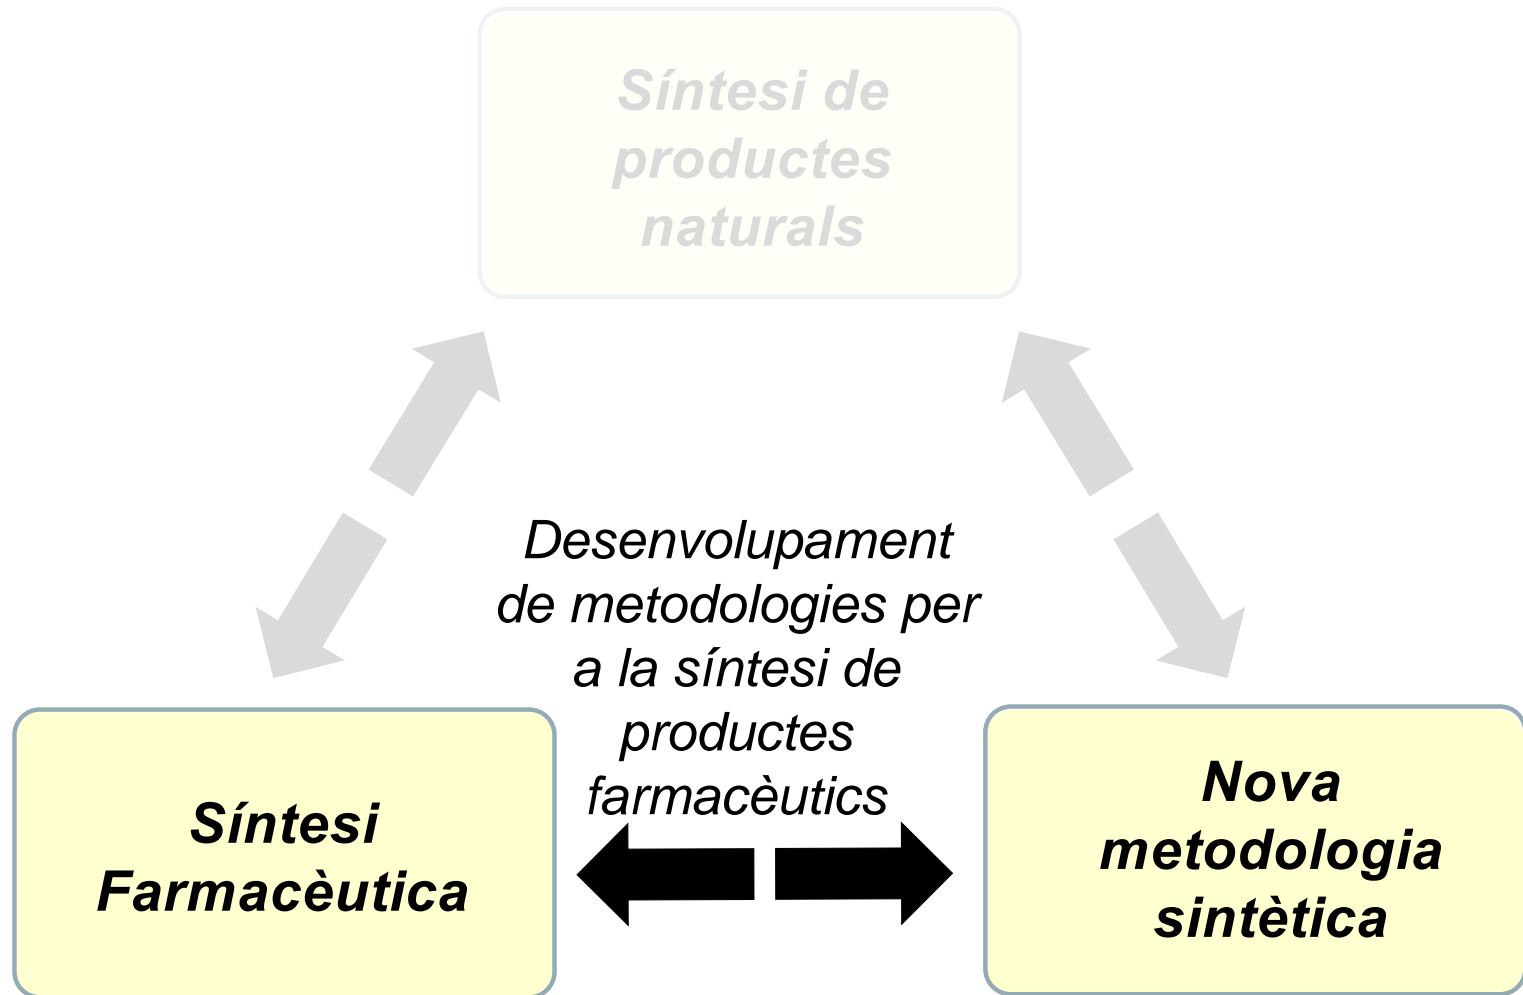

Focus de recerca

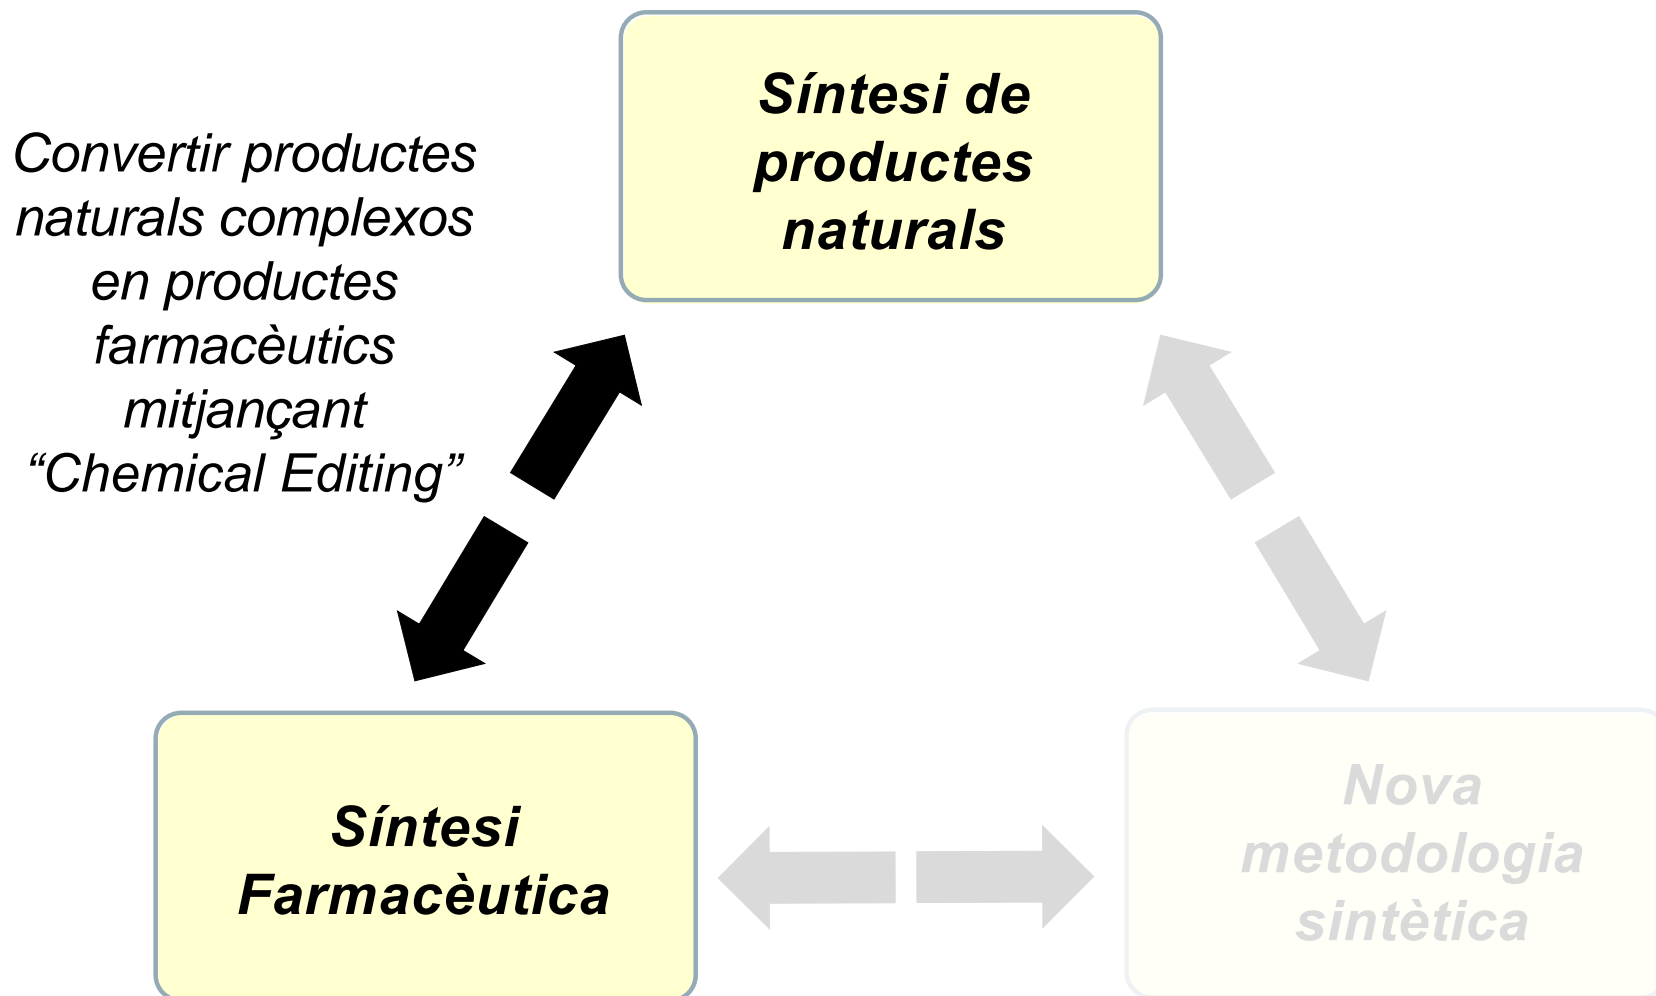

Presentació: Part 1

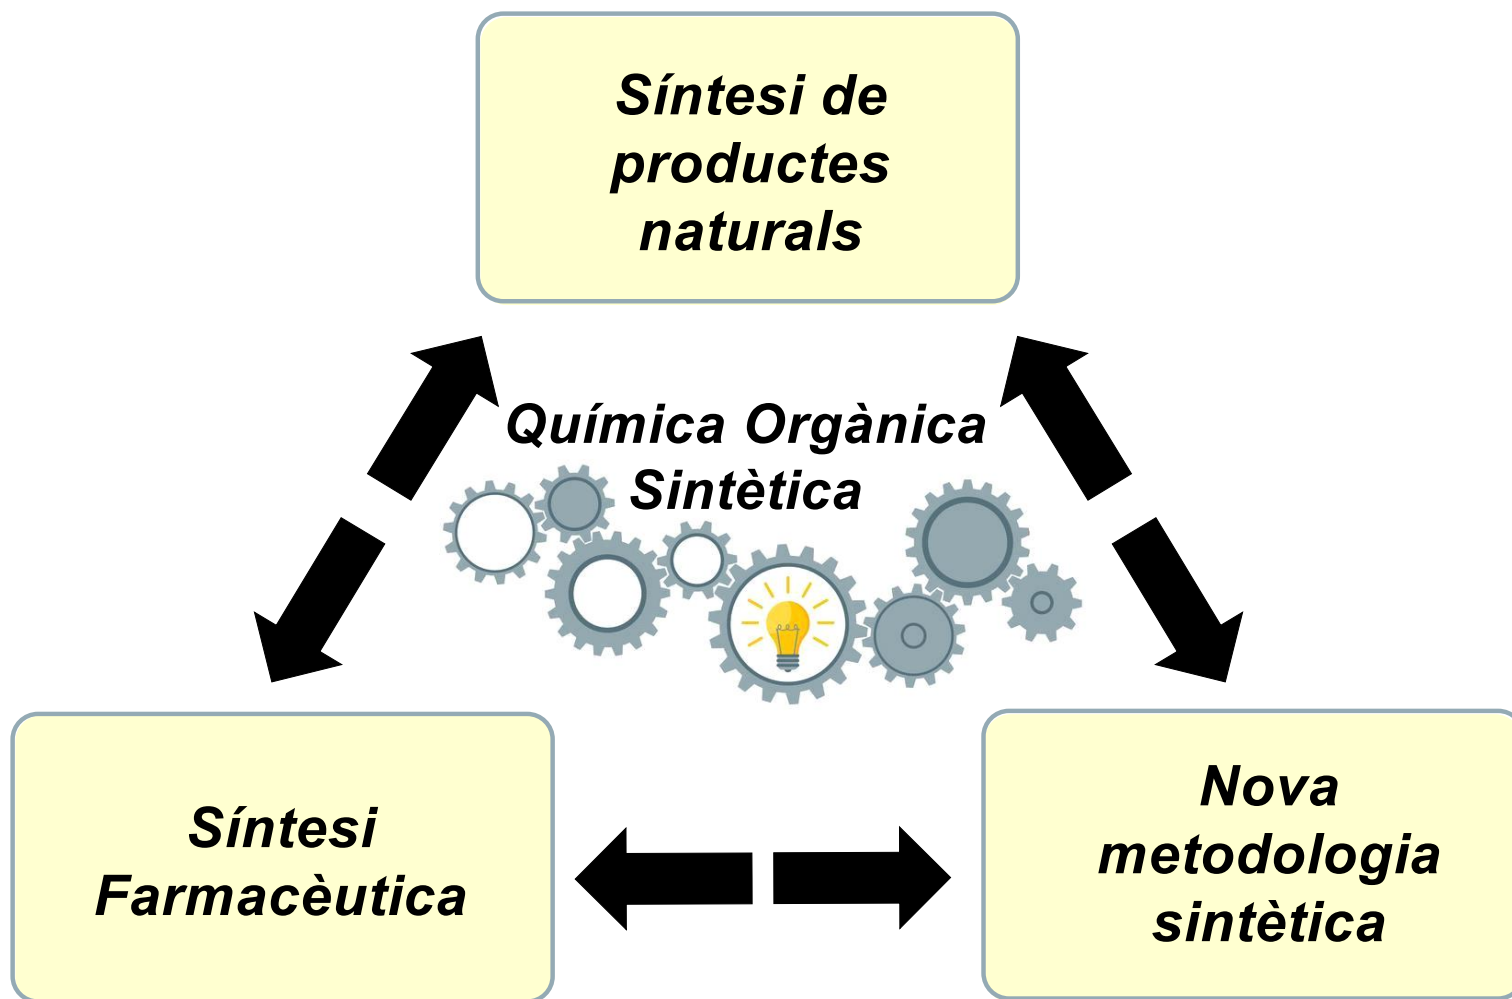

Presentació: Part 2

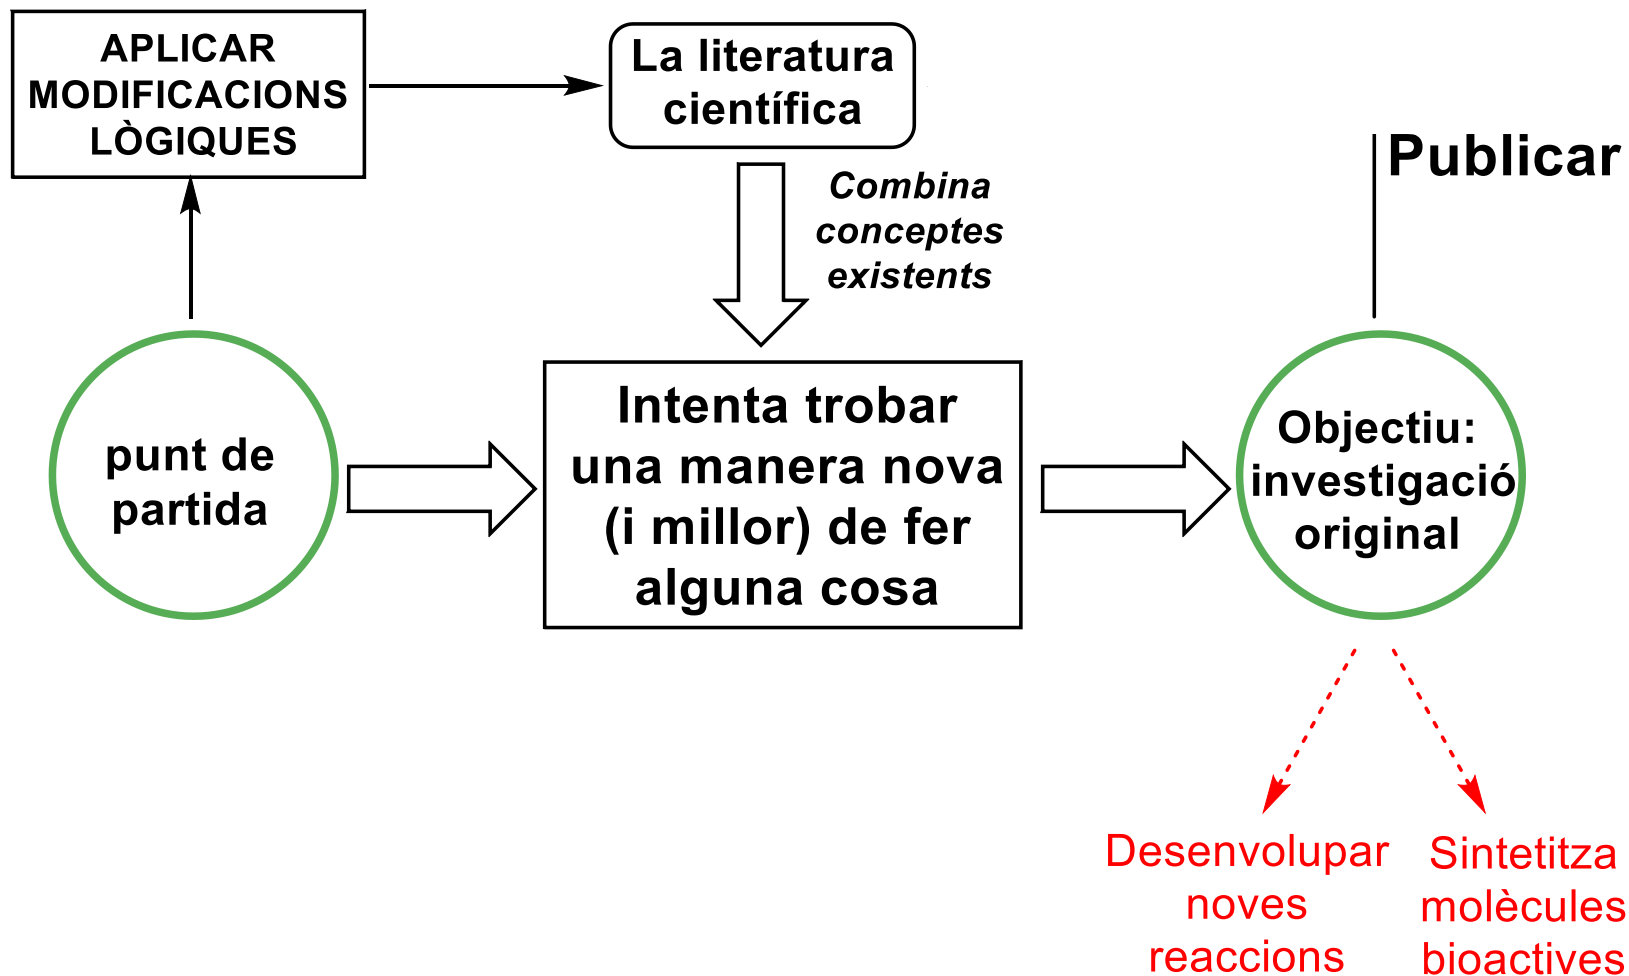

Presentació: Part 3

La química orgànica és el centre de tot

Desenvolupament de Projectes de Recerca

Modificadors de una reacció: 8 opcions possibles

Un exemple: reacció de Hajos-Parrish → reacció aldòlica catalitzada amb prolina

discovered in 1970's

intramolecular

Hajos-Parrish
reaction
cat. by proline

discovered in 2000

intermolecular

Aldol reaction
cat. by proline

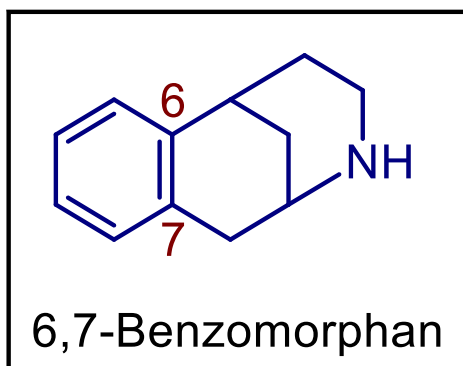

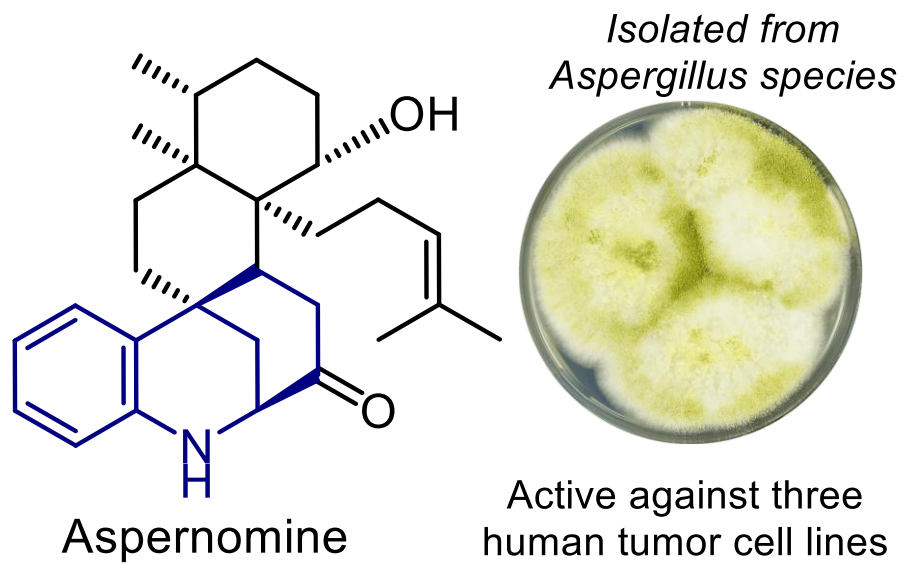

Benjamin List: Premi Nobel conjunt de Química 2021
per al descobriment de l'organocatàlisi

Part 1: Síntesi Total de Productes Naturals

Punt de partida: Intentar la Síntesi Total d'Aspernomina

Objectius alternatius completats

anàleg de cetona de
Wieland- Miescher

cetona
Wieland-Miescher

J. Am. Chem. Soc.
2010, 132, 5966.

anominine

Aspergillus nomius
(metabolit fúngic amb
propietats contra insectes)

Un protocol senzill per a la síntesi d'anàlegs WMK (escala de 15 g)

Adv. Synth. Catal. **2009**, 351, 2482–2490.

Organic Syntheses, **2011**, 88, 317-329.

Organic Syntheses, **2011**, 88, 330-341.

Review: *Synlett*, **23**, 337-356.

ChemCatChem, **2019**, 11, 4064– 4071.

cis-Decahidroquinolines mitjançant organocatàlisi asimètrica: aplicació a la síntesi total dels alcaloides flegmarins

CANVIAR ELEMENT
ESTRUCTURAL CLAU

**decahydroquinoline
ring system**

building block for multiple
total syntheses

Org. Lett.
2013, 15, 326.

Chem Comm.
2014, 50, 7099.

Org. Lett.
2015, 17, 5084.

J. Org Chem
2016, 81, 2629

Síntesi d'octahidroindols

decahydroquinoline ring system

Síntesi asimètrica organocatalitzada de morfans

move tethered NHTs
to enal component

Estratègia de reducció divergent

Estratègia de reducció divergent amb MHAT a la literatura

Shenvi *et al.* *J. Am. Chem. Soc.* **2014**, *136*, 1300

MILLORA SEGURETAT I EFICIÈNCIA

TÒXICA per NO TÒXIC (skull and crossbones icon with a red X)

EXPLOSIVE to NOT EXPLOSIVE (explosion icon with a red X)

QUÍMICA VERDA (flask with green liquid and leaves icon)

Què és la transferència d'àtoms d'hidrogen catalitzat per metalls (MHAT)?

MHAT
reactions

- *Condicions de reacció suaus i reactius no tòxics*
- *Potencials nous enfocaments de desconnexió per a la formació d'enllaços C-C*

- *De baix cost*
- *Fàcilment disponibles*

Intent de reducció divergent utilitzant condicions MHAT

Inversió completa de l'estereoselectivitat mitjançant el catalitzador de Wilkinson

H₂, Pd/C
LiOH (5 equiv)
MeOH

94%
dr 97:3

Org. Lett. 2013, 15, 326

H₂, RhCl(PPh₃)₃ (2 mol%)
MeOH

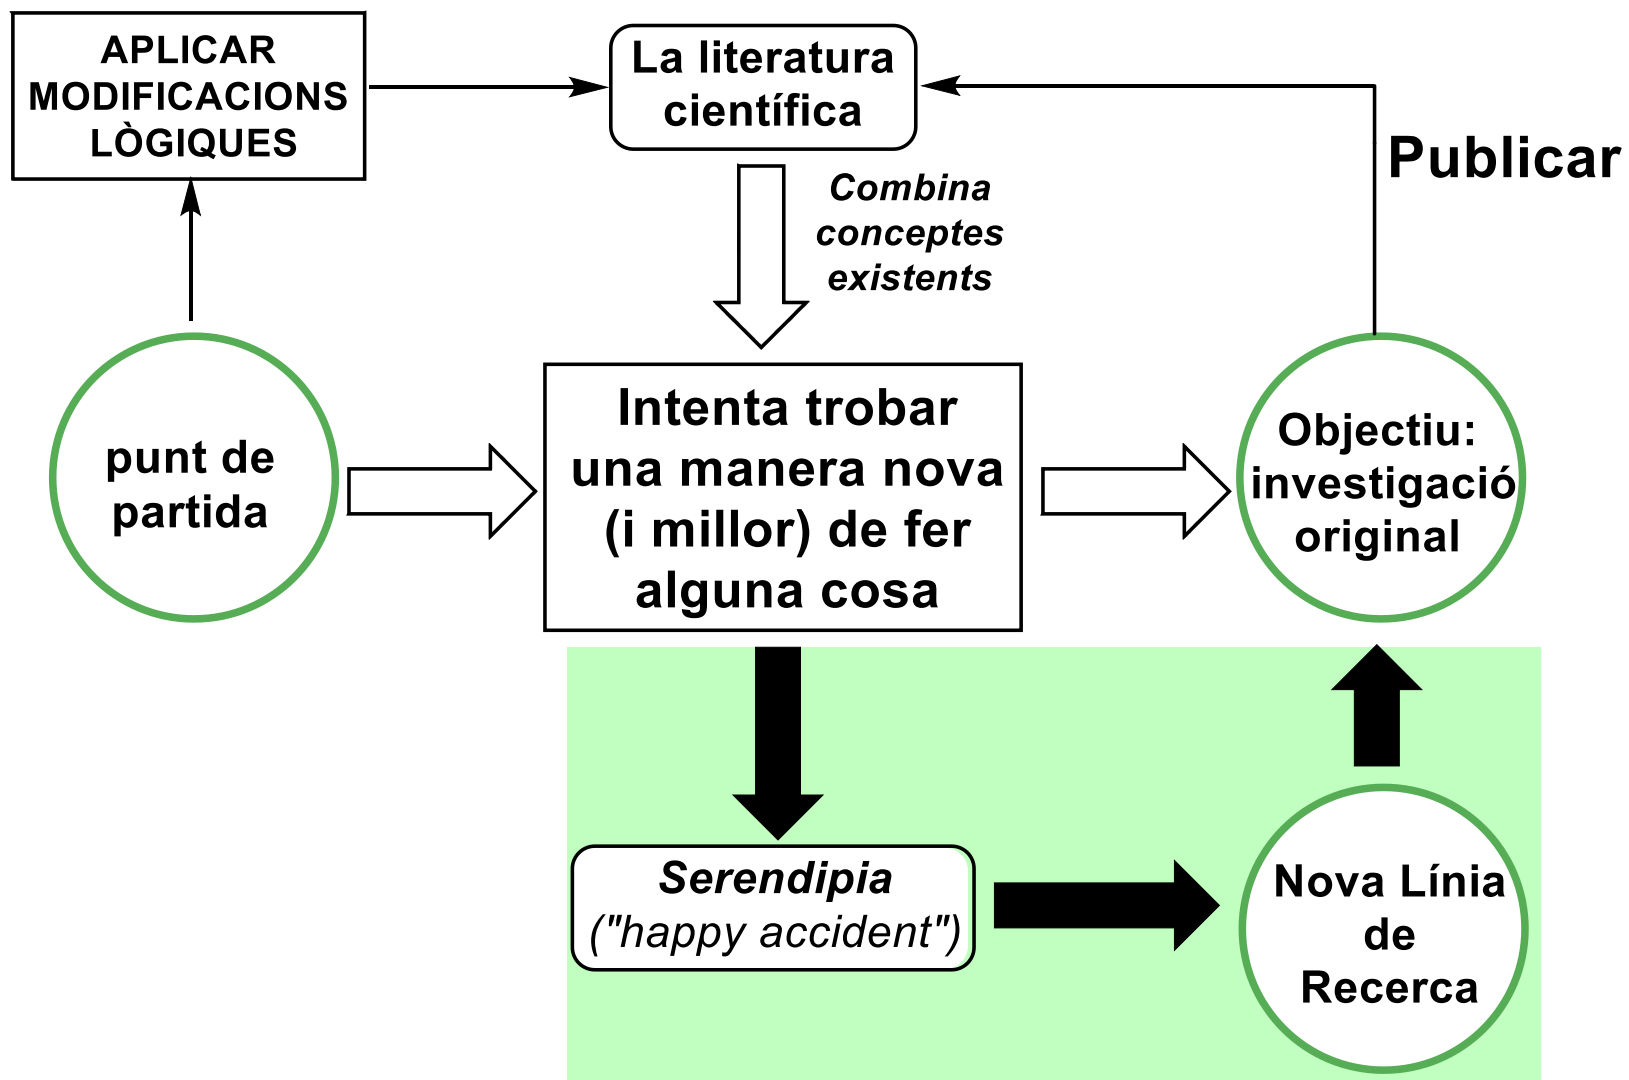

quantitative
dr 96:4

Org. Lett. 2015, 17, 5084

Desenvolupament de Projectes de Recerca

Aplicació de condicions de reducció de MHAT per a la síntesi total

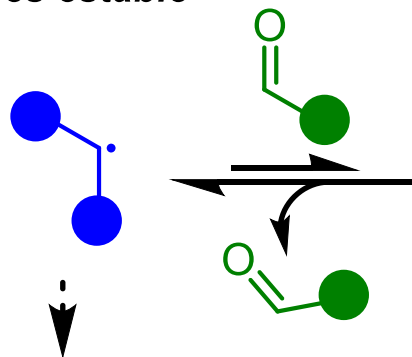

Una ciclització MHAT inesperada

Els carbonils no actuen normalment com a acceptors de radicals a causa de la reversibilitat de la reacció

més estable

reducció

menys estable

atrapar el radical

generar el radical

e.g.
photocatalysis

Part 2: Desenvolupament de metodologia sintètica

Metodologia Part 1: Optimització de la reacció

Entry	Metal (equiv)	Solvent	T (°C)	Time (h)	Yield
1	Mn(dpm) ₃ (1)	DCE	60	24	92%
2	Mn(dpm) ₃ (1)	EtOH	60	24	86%
3	Mn(dpm) ₃ (0.2)	DCE	60	24	79%
4	Fe(acac) ₃ (0.2)	DCE	60	24	30%
5	Fe(acac) ₃ (0.2)	EtOH	60	24	95%
6	Fe(acac) ₃ (0.2)	EtOH	60	3	92%
7	Fe(acac) ₃ (0.2)	EtOH	25	24	95%
8	Fe(acac) ₃ (0.2)	EtOH	25	3	59%

Metodologia Part 2: Determinar el "Substrate Scope"

“Substrate Scope”

6-membered ring compounds

cis-hydrindane compounds

acyclic compounds

bridged compounds

heterocyclic compounds

Aplicació a la síntesi de productes naturals

α -Amines terciàries

amantadine
*Parkinsons and
type A influenza virus*

Anti-HSV agent
Herpes simplex virus

Vildagliptin®
Type 2 diabetes

Cisplatin analogue
Anti-cancer agent

Acoblament MHAT amb C=N

MODIFICAR GRUP FUNCIONAL
QUE REACCIONA

entry	R	yield [%]	yield [%]
1	NHCbz	2a (97)	3a (98)
2	NHBoc	2b (82)	3b (90)
3	OMe	2c (98)	3c (87)
4	NHPh	2d (98)	3d (19)

MHAT per generar Adamantanes substituïts

MODIFICAR GRUP FUNCIONAL QUE REACCIONA

MILLORA SEGURETAT I EFICIÈNCIA

TÒXICA per NO TÒXIC

EXPLOSIVE to NOT EXPLOSIVE

QUÍMICA VERDA

Reaction Precedent: Kim, Lee et al. J. Am. Chem. Soc., 1991, 113, 9882.

reagent used

potentially explosive!!
keep in solution $<5^\circ\text{C}$

Síntesi de compostos semblants a l'adamantà substituïts mitjançant una reacció tàndem MHAT

Síntesi d'heterocicles que incorporen un bloc de construcció d'amantadina

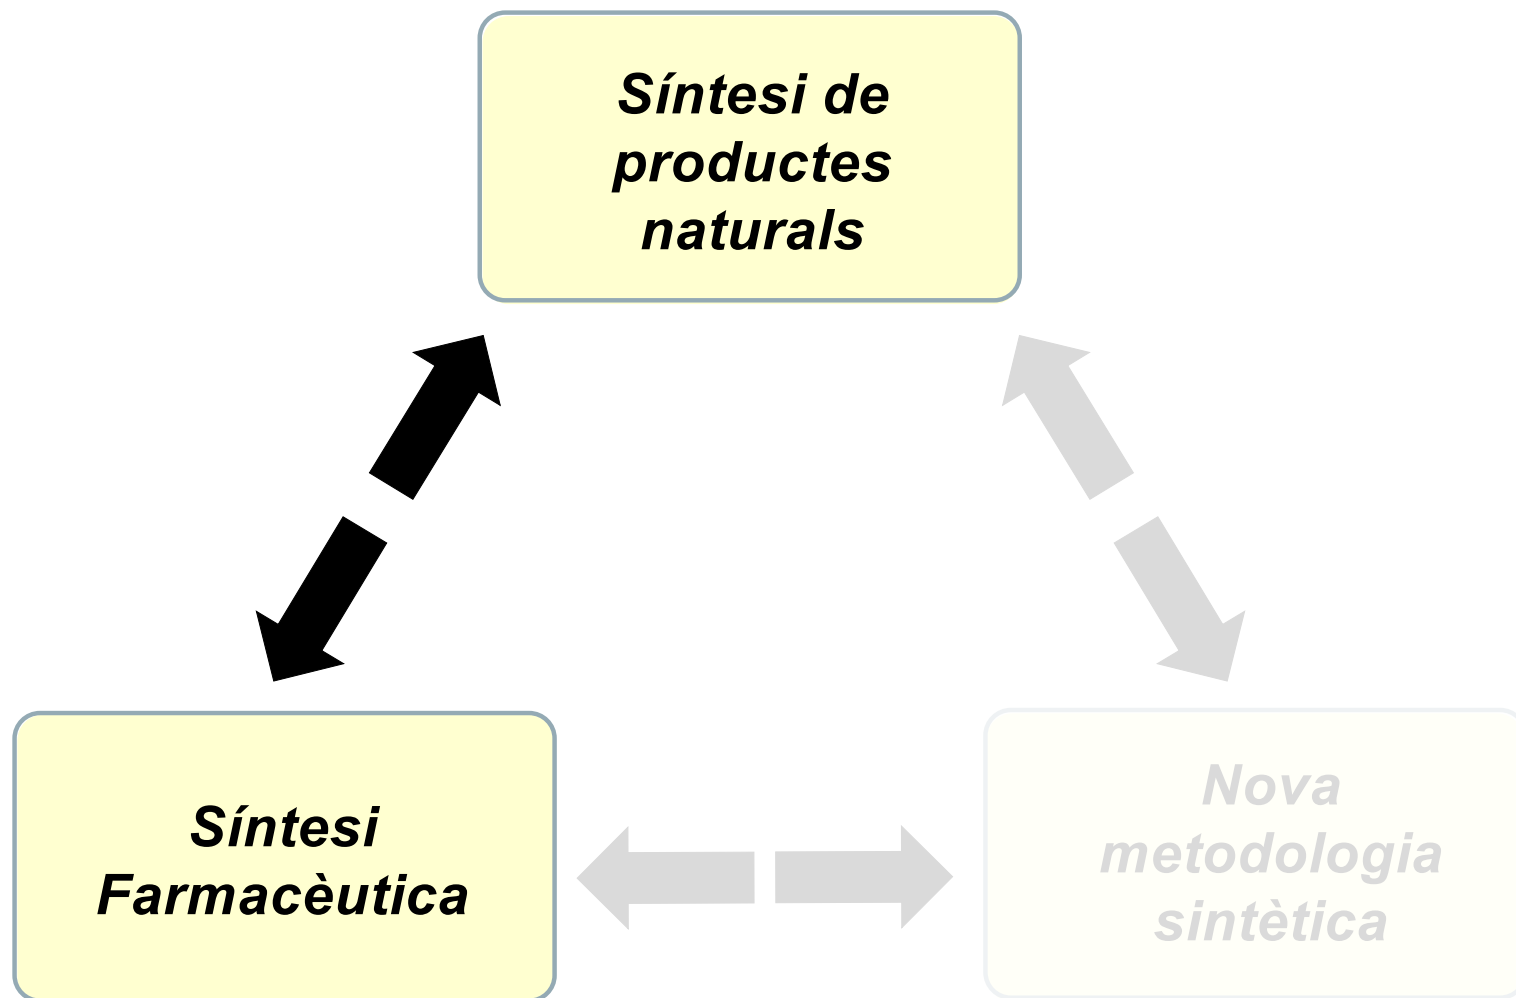

Acoblament MHAT intermolecular de tosilhidrazones

Application of the reaction. Formal Synthesis of Methamphetamine

Part 3: Convertir productes naturals complexos en productes farmacèutics

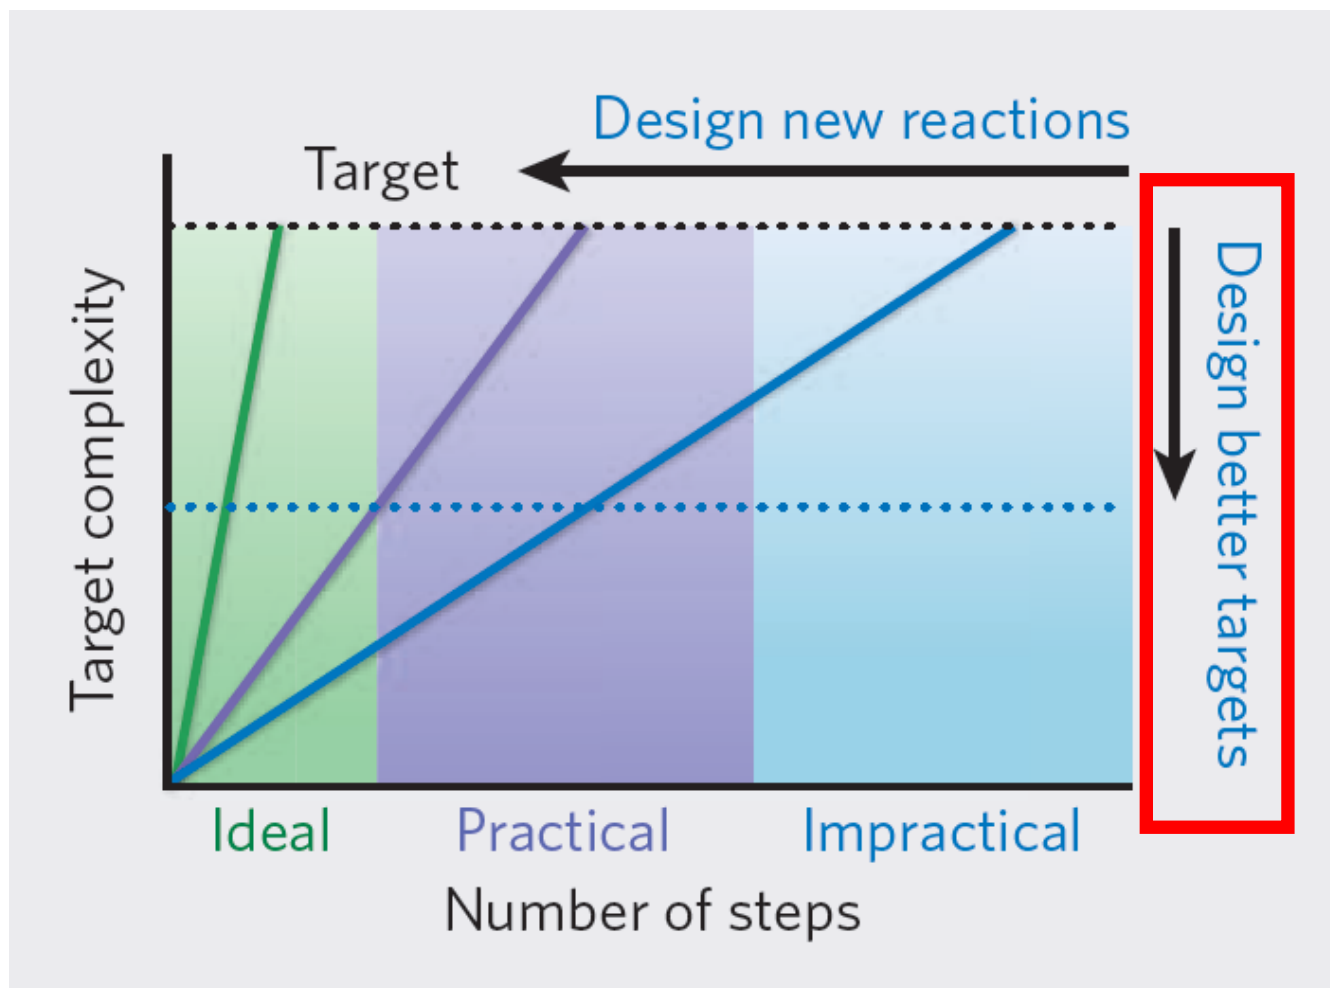

Reducció de la complexitat

Madangamine A

(Activitat contra el càncer)

baixa biodisponibilitat

Massa complex per sintetitzar
amb quantitat

Eliminar la funcionalitat pot simplificar molt la síntesi

Una part important d'un producte natural pot ser innecessari per a la seva activitat biològica.

Elimina les funcionalitats innecessàries

síntesi simplificada

Anàlegs més actius?

Exemple: de briostatina a "briolog"

- En el compost anticancerígen briostatina només el fragment sud interacciona amb la diana.
- En eliminar la funcionalitat innecessària del fragment nord de la síntesi es fa considerablement més curta

Tornant a la síntesi de l'aspernomina

*Isolated from
Aspergillus species*

aspernomina

Activitat contra diverses
línies de cèl·lules tumorals
humanes

anominina

Propietats insecticides
Sense activitat contra el càncer

Síntesi del nucli aromàtic de l'aspernomina

Avaluació de les propietats biològiques

“Screening” general de la citotoxicitat dels productes contra cèl·lules MCF-7 (càncer de mama)

Avaluació de les propietats biològiques

Avaluació de les propietats biològiques

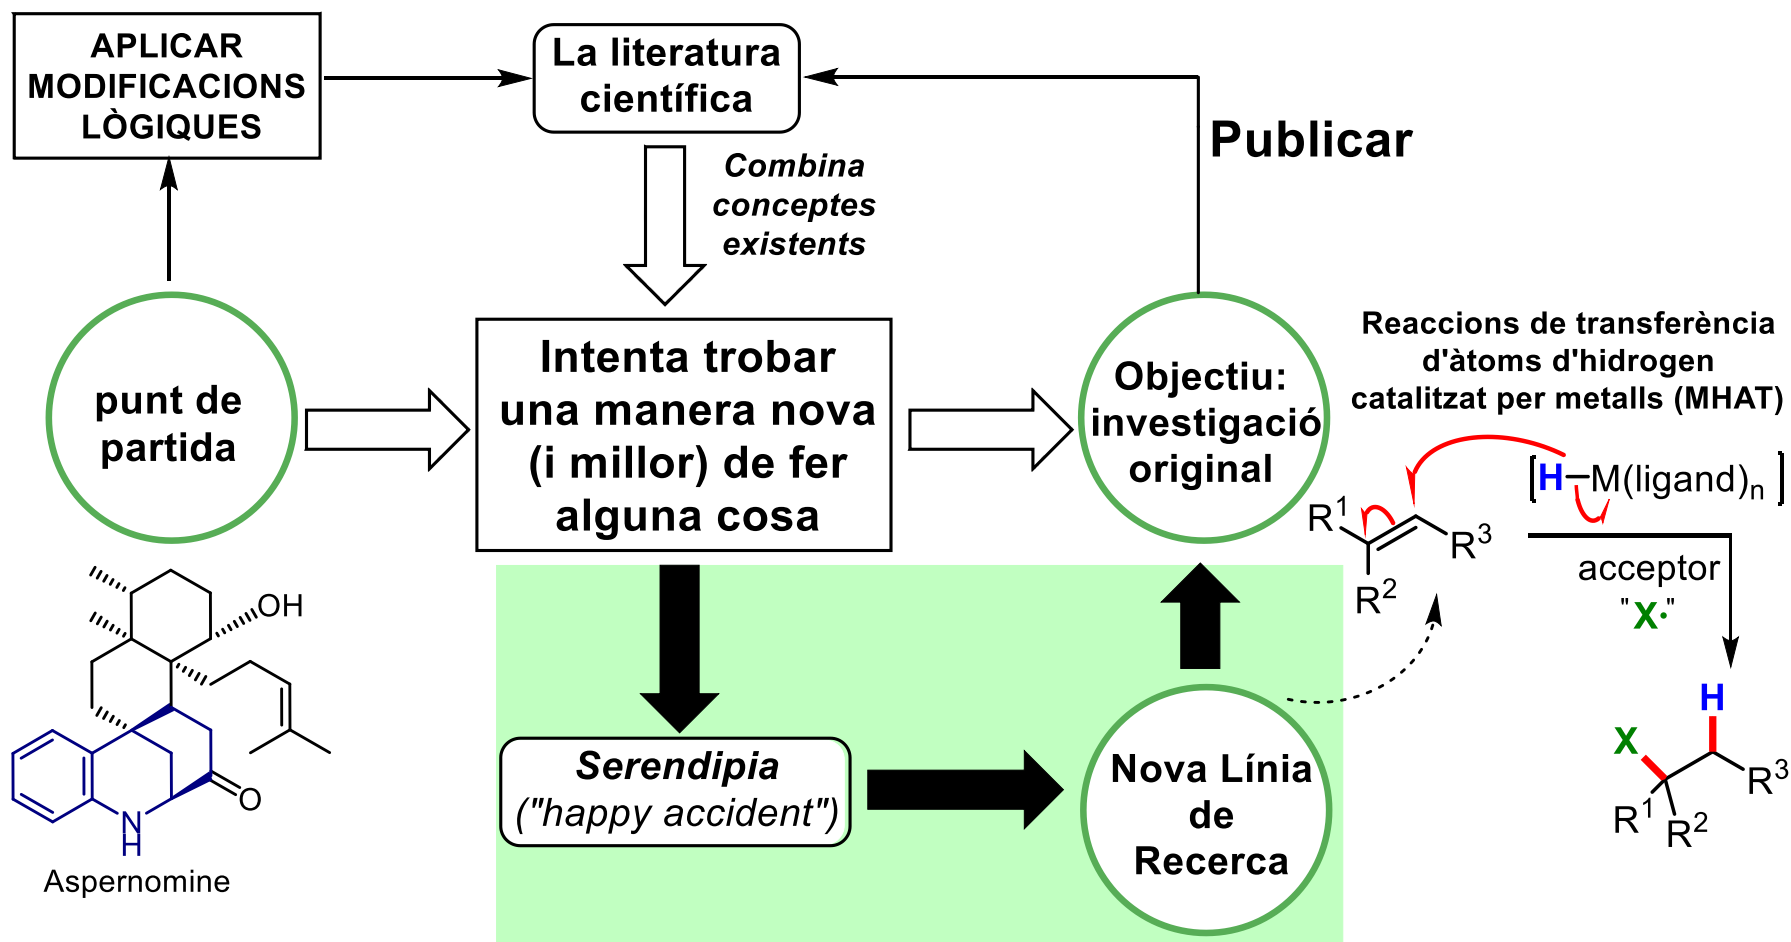

Rodríguez, L. G; Delgado, A.; Ciudad, C. J.; Noé, V.; Bonjoch, J; Bradshaw, B.
J. Org. Chem., **2022**, *87*, 15693.

Mecanisme d'actuació proposat

Conclusions

Una visió general del desenvolupament de projectes de recerca

Agraïments

- Prof. Josep Bonjoch

Grant number: PID2022-139257NB-I00

Estudiants de doctorat

- Jordi Puig (MHAT)
- Laura Rodríguez (MHAT & Editing of Natural Products)
- Mar Saladrigas (MHAT)
- Claudio Parra (Organocatalysis)
- Caroline Bosch (Total Synthesis)
- Gisela Saborit (Total Synthesis)
- Carlos Luque Corredera (Organocatalysis & Total Synthesis)
- Gorka Exterbarria (Organocatalysis & Total Synthesis)

Estudiants de Màster

- Aina Serra (MHAT)
- Xavier Bravo (Functionalization of Heterocycles)
- Wilson Perugachi (MHAT)
- Guillhem Loren (MHAT)

Proves biològiques

- Ana Delgado
- Carlos J. Ciudad
- Véronique Noé
